MPS-VP2 TrimKit

Total
VALVE PARTS
Replacement
Program

TrimKit

TrimKit is an innovative program for valve parts replacement. Customers save time, save money, and save needless aggravation. **MPS is the only vendor needed for valve parts and all related soft goods.**

Here's how TrimKit works:

- Millennium Power Services (**MPS**) manufactures or refurbishes valve parts.
- **MPS** ships it back along with **TrimKit**; a protective case containing pistons, gaskets, seals, packing—whatever meets the valve's exact specs for complete reinstallation.

Failed OEM Assembly

MPS New Seat Assembly

One vendor—MPS—makes valve replacement simple:

- Valve and **TrimKit** contents save money over OEM costs.
- Lead time is reduced.
- **MPS** manages the valve parts inventory, eliminating the customer's need to worry over missing soft goods.
- One **TrimKit** inventory number replaces multiple part numbers.
- Contract installation labor is reduced; everything is ready when it's needed.

TrimKit reduces cost of ownership; increases valve parts' life. Once replacement is complete, old parts are packed into the protective **TrimKit** case, then shipped back to **MPS**; **MPS** then refurbishes and/or replaces parts and replenishes all soft goods. Full reports are included; root cause analysis is done on valve wear and/or failures; checklists are also included for added verification.
