

Millennium Power Services Account Manager Offers Specialized Expertise to New England

With over two solid decades in the power and process industry, Anthony “Andy” Forester is a hands-on, multi-skilled account manager for Millennium Power Services (MPS). Having joined the firm in the summer of 2018, Forester serves eastern Massachusetts, southern New Hampshire, and all of Rhode Island.

A native of the Boston area, Forester studied mechanical engineering at Wentworth Institute of Technologies. “I knew that the industry was the right fit for me,” Forester said. “Over the years, I wanted to learn every facet I could.”

He gained initial experience from “hands-on work,” including installing boilers and related systems to becoming a certified pipe welder, licensed pipe fitter, and project manager. He then transitioned into a position as a manager of supplying pipe valves, fittings, and safety valve services to power and process customers. His next stop was to extend his experience by becoming an account manager, providing product and service solutions to customers. He brought all that extensive knowledge to MPS.

“The most important part of my job is to develop a good relationship with our customers. That way, I get to understand their day-to-day needs and long-term goals, which, in turn, gives me a better chance to help them optimize the performance of their plant through the most efficient controls and effective processes.”

His enthusiasm also permeates his spare time: Forester holds a private pilot license and enjoys flying float planes in Maine. He participates in competitive trap shooting, pistol and rifle competitions, and likes to ride motorcycles. And with a wife and three children, he makes room for lots of family time.
